Project Name	Laptop Request Catalog Item
Maximum Marks	2 Marks

Customer Problem Statement Template:

Employees and managers currently face delays and confusion when requesting new laptops due to a lack of a structured and automated system. Requests are often handled manually through emails or messages, which leads to inefficiencies, missing approvals, and tracking issues. There is no unified system to monitor request status, validate eligibility, or ensure timely fulfillment.

A digital **Laptop Request Catalog Item** is needed to streamline the process. This solution would enable users to submit requests online, automatically route them for approval, check inventory availability, and notify the requester of progress. Implementing this system will improve operational efficiency, transparency, and employee satisfaction.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	an Employee	request a laptop through the current manual process	I need to send emails and wait for multiple levels of approval	the process is slow and confusing	slow and confused, which affects my ability to start new projects or perform tasks that require specific hardware
PS-2	an IT Manager	ensure that all laptop requests are approved properly and tracked efficiently	the current manual system allows miscommunication, lacks transparency, and causes delays in hardware delivery	I need a built-in catalog item that automates request approval, validates inventory, and triggers notifications	worried about workflow management, accuracy, and overall service quality

Problem Statement PS 1:

As an employee, I am trying to request a laptop through the current manual process, but I need to send emails and wait for multiple levels of approval, which makes the process slow and confusing. This affects my ability to start new projects or perform tasks that require specific hardware. I need a streamlined and automated way to submit requests, view status, and get timely responses from the IT department.

Problem Statement PS 2:As an IT manager, I want to ensure that all laptop requests are approved properly and tracked efficiently. However, the current manual system allows miscommunication, lacks transparency, and causes delays in hardware

delivery. I need a built-in catalog item that automates request approval, validates inventory, and triggers notifications to both employees and managers. This will improve workflow management, accuracy, and overall service quality.
