

Ideation Phase

Empathize & Discover

Date	2 NOVEMBER 2025
Team ID	NM2025TMID06137
Project Name	Laptop Request Catalog Item
Maximum Marks	4 Marks

Empathy Map Canvas:

In the Empathize & Discover phase, the team focused on understanding how employees, managers, and IT staff handle the current laptop request process. Through observation and interviews, the team found that users experience frustration due to manual request procedures, lack of visibility on approval status, and delays in laptop provisioning.

By analyzing these pain points, the team identified key challenges such as unclear communication channels, absence of automated tracking, and dependency on manual follow-ups. These discoveries emphasized the need for an automated and transparent **Laptop Request Catalog Item** that simplifies request submission, approval, and fulfillment within the organization.

Example:

The empathy map helped us understand user frustrations and needs in the laptop request process. It reflects their pain, actions, goals, and expectations from the system.

Employees want a quick, transparent, and easy-to-use interface for requesting laptops. Managers need automated approvals and visibility into request status. IT staff require accurate tracking of hardware inventory and delivery timelines.

By understanding these insights, the team could design a solution that reduces communication gaps, improves workflow automation, and ensures accountability across departments.

Insights Derived:

By deeply understanding users through empathy mapping, the team identified several key frustrations and opportunities:

Pain Points: Manual email-based request system, delayed approvals, and no request tracking.

Needs: A structured digital platform with real-time updates and simplified approval workflow.

Actions: Users currently follow up repeatedly with IT and managers to know request progress. **Gains:** An automated catalog item can reduce waiting times, improve

communication, and enhance satisfaction. These findings shaped the foundation of a user-friendly and efficient **Laptop Request Catalog Item** system that empowers employees while optimizing IT resource management.
