

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	2 NOVEMBER 2025
Team ID	NM2025TMID06137
Project Name	Laptop Request Catalog Item

This guided project demonstrates how to create and manage a **Laptop Request Catalog Item** within an organizational service portal. The goal is to enable employees to request laptops easily through a predefined catalog item, with automated approval workflows and inventory checks. The system ensures proper tracking, approval from managers, and timely provisioning of hardware to users.

The workflow includes creating a catalog item in ServiceNow, defining fields such as laptop model, configuration, justification, and approval hierarchy. Once a request is submitted, it goes through automated validation and approval before fulfillment. This project streamlines IT service delivery, reduces manual errors, and provides a transparent view of hardware distribution.

Step 1: Team Gathering, Collaboration, and Selecting the Problem Statement

Step 2: Brainstorm, Idea Listing, and Grouping

Fig 1: Illustration showing team members brainstorming ideas related to catalog item creation.

Brainstorm: Team members freely shared creative ideas about request forms, approval workflows, and hardware tracking methods.

Idea Listing: Each suggestion was documented — from UI design improvements to real-time request tracking and approval notifications.

Grouping: Similar ideas were grouped under categories like “User Experience,” “Automation,” “Approval Workflow,” and “Inventory Management.”

Action Planning: Chosen ideas were converted into specific action items with clear responsibilities and deadlines for development and testing.

Step 3: Idea Prioritization

Fig 2: Diagram illustrating the workflow of the laptop request process, including submission, approval, and fulfillment.

Idea prioritization helped identify the most critical components to implement first. The team focused on creating a simple and efficient catalog item that allows users to submit requests and track their status. The priority steps included: Designing a user-friendly catalog form for laptop selection. Implementing an approval workflow based on user hierarchy. Integrating with inventory management for availability checks. Setting automated email notifications for updates. Testing end-to-end request and fulfillment scenarios. By prioritizing these elements, the team ensured that the system improved operational transparency and efficiency while reducing manual workload.
