

Project Design Phase

Proposed Solution

Date	02 NOV 2025
Team ID	NM2025TMID06137
Project Name	Laptop Request Catalog Item
Maximum marks	2 Marks

Proposed Solution Template:

Component	Description
Solution Overview	Provide a concise summary of the laptop request catalog functionality and its purpose.
Key Features	List the core capabilities such as request form, automated approval flow, notifications, and fulfillment tracking.
Technology Stack	Mention platforms/tools such as ServiceNow Service Catalog, Flow Designer, and user access roles.
Workflow Structure	Briefly explain request submission, approval, fulfillment, and closure steps.
User Impact	Describe how users benefit (faster processing, transparency, easy tracking).
Admin/IT Impact	Explain improved workload management, asset tracking, and audit readiness for IT staff.

Conclusion:

The Laptop Request Catalog system provides a structured and efficient approach to managing laptop allocation within the university environment. By automating approvals, simplifying request submission, and improving asset tracking, the solution minimizes delays and administrative workload. The platform supports better accountability, transparency, and service delivery for students, faculty, and IT staff. Implementing this catalog item ensures a seamless request-to-fulfillment experience, contributing to overall improvement in the institution's IT service management processes.

Solution Description:

The proposed solution is a ServiceNow-based Laptop Request Catalog system designed to streamline the device allocation process within the university. Users will submit requests through a guided catalog form capturing necessary details such as laptop type, justification, and duration of use. Once submitted, an automated workflow will route the request to the appropriate authority for approval, followed by notification to the IT support team for asset assignment and fulfillment. The system ensures transparency through real-time request tracking, automated notifications, and proper record maintenance. This solution enhances operational efficiency, reduces administrative delays, and establishes a standardized process for laptop distribution.
