

Project Design Phase- II

Dataflow Diagrams and Userstories

Date	02 NOV 2025
Team ID	NM2025TMID06137
Project Name	Laptop Request Catalog Item
Maximum marks	4 Marks

Dataflow Diagram:

A Data Flow Diagram (DFD) is a structured graphical representation that illustrates how data moves through a system, the processes that transform the data, the data stores where it is kept, and the external entities that interact with the system. It focuses on the flow of information rather than system behavior or physical design. DFDs help analysts and developers understand system functionality, identify data dependencies, and ensure clarity in system development. They are used during the analysis and design phase of software projects to visually map input data, transformation logic, and output results, allowing teams to identify redundant steps, improve efficiency, and ensure proper data handling. DFDs can be created at multiple levels (Level 0, Level 1, Level 2) to gradually expand detail, starting with an overview and progressing to detailed operational flows. By separating logical data movement from technical implementation, DFDs support clear communication, reduce ambiguity, and serve as a foundational documentation tool in system analysis and database-driven application design.

Example:

User Stories:

User Story ID	As a...	I want to...	So that I can...	Acceptance Criteria
US-01	Employee	Request a laptop through the service catalog	Get a device needed for academic/work tasks	User can fill and submit laptop request form
US-02	Employee	Track my request status	Know if my request is approved or pending	Status visible in portal (Submitted, Pending, Approved, Completed)
US-03	Manager	Approve or reject laptop requests	Ensure only valid requests are approved	Approval page with Approve/Reject options & remarks
US-04	IT Staff	Receive laptop request tasks	Fulfill approved requests	Request auto-assigned to IT fulfillment queue
US-05	IT Staff	Update asset record and assign laptop	Maintain asset inventory accuracy	System stores asset ID + assigns to requester
US-06	System	Send notification emails	Keep users informed on progress	Email triggers on Submission, Approval, Fulfillment
US-07	Admin	Configure SLAs	Ensure request is processed in time	SLA monitors breaches, visible in request record
US-08	Employee	Validate required form fields	Avoid incomplete requests	Mandatory fields prompt errors if empty
